

TRACS Quick Reference Guide

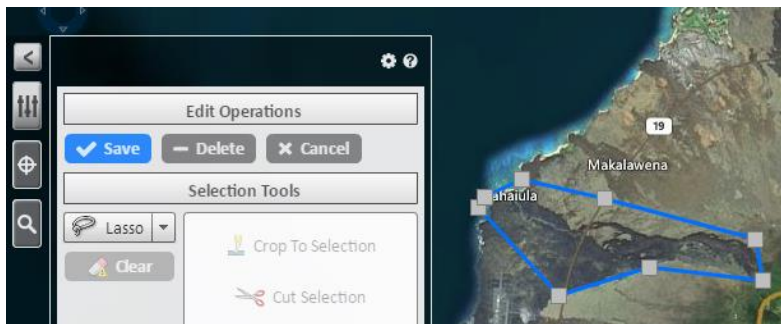

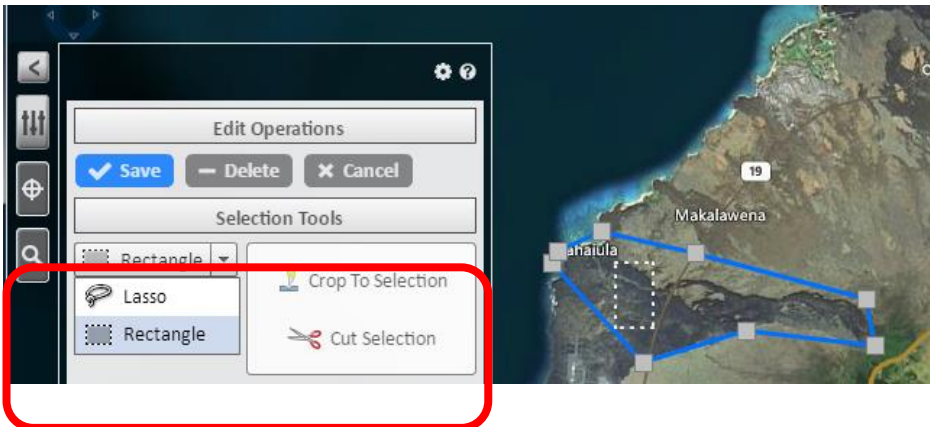

Lesson 12 Advanced Shape Editing

Step	Action
1	<p>Open Window to Edit or Replace a Shape</p> <p>If you have already saved the shape, reopen it using one of the three methods below (A, B or C):</p> <p>A. For a Project or Action, open the Guided Process Tool:</p> <ul style="list-style-type: none"> Project Shape: Select Task 1 Enter Project Data (left side) and click Edit Project Shape or Replace Project Shape. Action Shape: Select Task 5 Enter Action Data and click Edit Action Shape or Replace Action Shape.  <p>B. Locate the polygon on the map and click inside the shape's boundary to open the orange Feature Frame box around it. Click on the arrow  in the upper left to open the menu. Select the Shape menu and select Edit Shape, Replace Shape or one of the other tools.</p> 

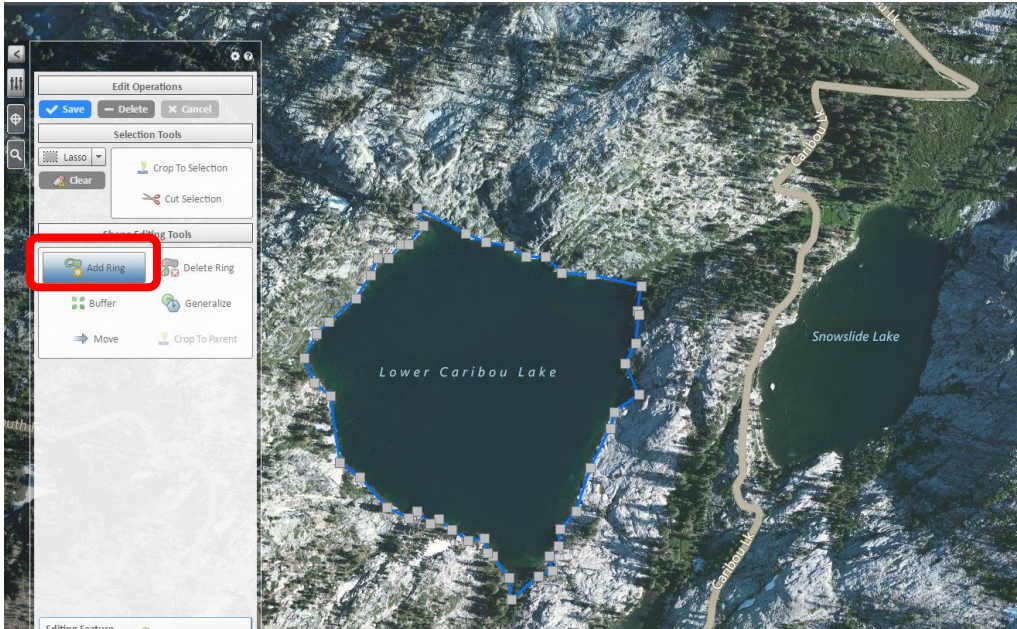

TRACS Quick Reference Guide

Step	Action
	<p>C. From the Feature Explorer window (left side), right click on the name of the plan, project or action to open a menu of similar options. Click Replace Shape (or Guided Process Tool and follow steps in 1A to edit the shape).</p> 
2	<p>To replace a shape:</p> <ul style="list-style-type: none"> Select Replace Shape using one of the methods in step 1. The Edit Operations window will open allowing you to create the new shape that will replace the existing one using any of the feature drawing tools. 

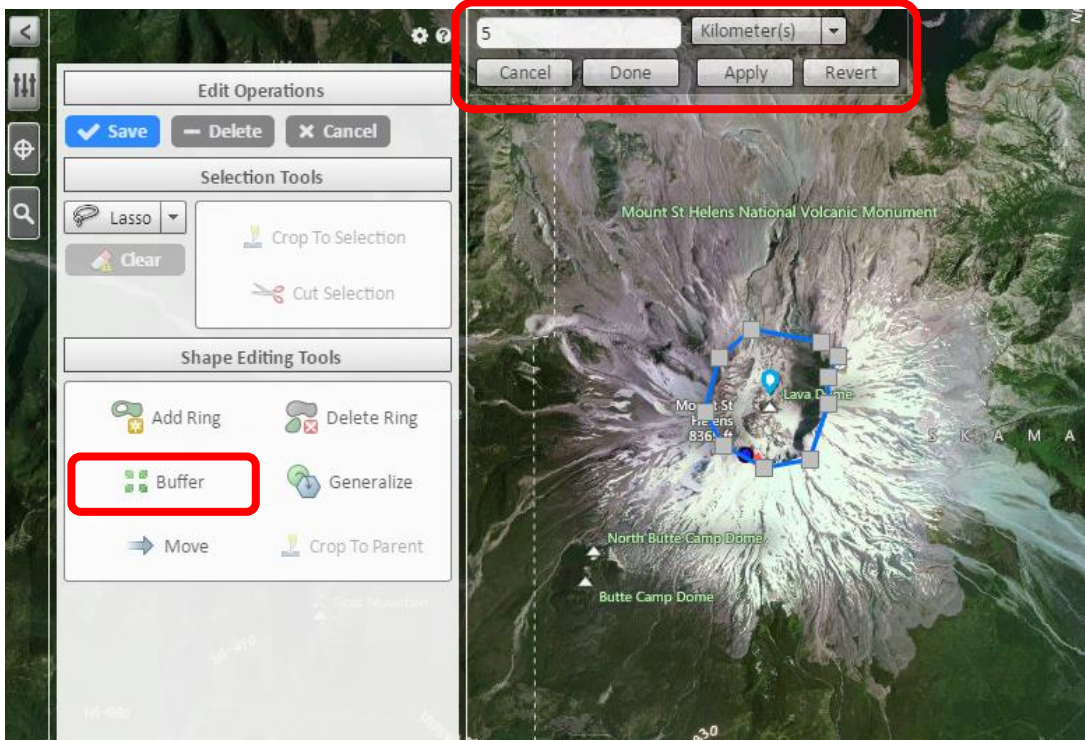

TRACS Quick Reference Guide

Step	Action
3	<p>To edit a shape: Select Edit Shape using one of the methods in step 1. The Edit Operations window will open. The shape can be edited by using the tools in the window or by editing the shape itself (click on the boundary to move it). The options at the top allow you to Save, Delete or Cancel.</p> <p>CAUTION: If you delete a shape, it will delete all the associated data with it (i.e. if you delete the project shape, all associated project data is also deleted).</p> 
4	<p>To crop or cut a part of a shape:</p> <ul style="list-style-type: none"> Click the drop down menu for Lasso and select Lasso to create a free-form shape or the Rectangle to draw a rectangular shape. The shape will flash in black and white.  <ul style="list-style-type: none"> The Crop to Selection and Cut Selection buttons are available once an area is selected with the lasso or rectangle. <ul style="list-style-type: none"> To exclude an area within the shape boundary, select the area you would like to exclude and click Cut Selection. To crop an area from the shape, select the “good” area and click Crop to Selection.

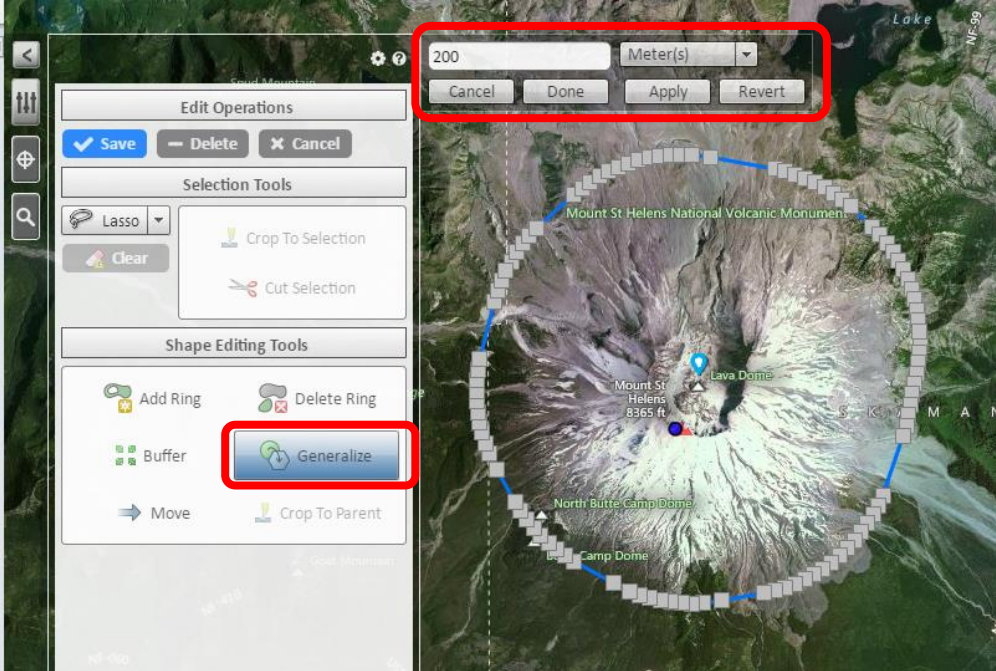

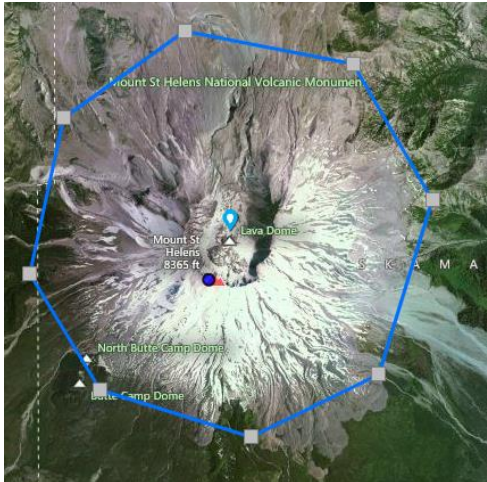

TRACS Quick Reference Guide

Step	Action
5	<p>To create a multi-shape polygon (multiple distinct geographic areas or rings in one plan/project/action):</p> <ul style="list-style-type: none"> Draw the first shape and then click Add Ring to draw another shape to be added to the plan, project or action area. Use the Delete Ring button to remove it. Once all rings have been added, click Save.  <ul style="list-style-type: none"> The map will now display the rings as part of the overall project, plan or action area.

Step	Action
6	<p>To extend the area around a shape (buffer):</p> <ul style="list-style-type: none"> Click Buffer and fill out the box that opens to the top right of the window. Enter the amount and select the measurement from the drop down menu (meters, kilometers, miles or feet). Using a negative value will shrink the feature by the specified distance. Click Apply.   

TRACS Quick Reference Guide

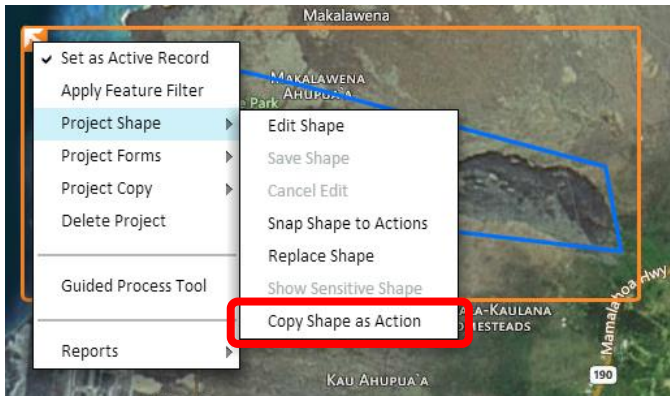

Step	Action
7	<p>To simplify a shape:</p> <ul style="list-style-type: none"> Click Generalize to simplify a shape by reducing the number of vertices (gray boxes indicating changes in direction) displayed. Enter the amount and select the measurement from the drop down menu (meters, kilometers, miles or feet). Click Apply.  

TRACS Quick Reference Guide

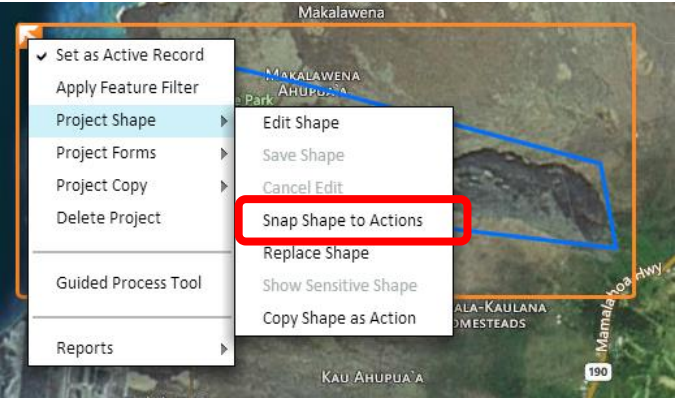

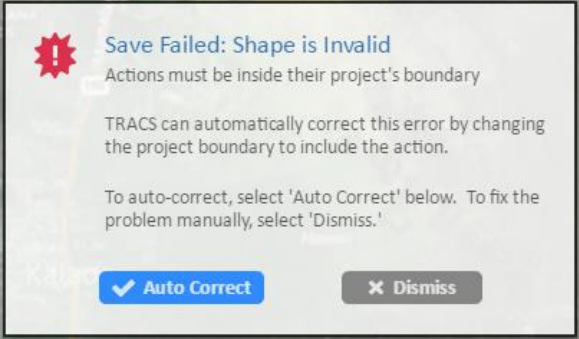

Step	Action
8	<p>To move a shape:</p> <ul style="list-style-type: none"> Click on the lock icon  (middle of the top toolbar) to lock the screen from moving (a blue lock icon will appear at the top of the screen). Click the Move button and a black arrow will appear on the screen. Select the feature to drag and drop it to a new location. Then click Save.

TRACS Quick Reference Guide

Step	Action
9	<p>To copy the project shape as the action:</p> <ul style="list-style-type: none"> • Locate the project polygon on the map and click inside the shape's boundary to open the orange Feature Frame box around it. Click on the arrow  in the upper left to open the menu. • Click on Set as Active Record if a checkmark is not present (Note: This does not change the project status to active. It is used to mark a project shape as the active feature in order to associate an action to that project). • Select the Shape menu and select Copy Shape as Action. The action shape will appear in green and the window to enter action data will open. <div data-bbox="560 835 1226 1228" data-label="Image">  </div> <div data-bbox="852 1228 933 1312" data-label="Image">  </div> <div data-bbox="560 1312 1226 1606" data-label="Image">  </div>

Step	Action
10	<p>To update the project shape to include the action area:</p> <ul style="list-style-type: none"> Locate the project polygon on the map and click inside the shape's boundary to open the orange Feature Frame box around it. Click on the arrow  in the upper left to open the menu. Select the Shape menu and select Snap Shape to Actions.  <ul style="list-style-type: none"> If you create a new action that is outside the boundary of the project, this error message will appear. <ul style="list-style-type: none"> Click Auto Correct to update the project shape to include the action boundary. Click Dismiss to edit the action shape. Use the Crop to Parent button to crop the action area to the project boundary. 

TRACS Quick Reference Guide

Step	Action
11	<p>To see the sensitive shape:</p> <p>If a project is marked as sensitive on the Project Properties form, the shape will be buffered (or extended) to the county or state boundary so the exact location is not shown on the map or displayed on public reports. Also keep in mind that projects marked "Sensitive" are not displayed in the Public Conservation Viewer.</p> <ul style="list-style-type: none"> Locate the project polygon on the map and click inside the shape's boundary to open the orange Feature Frame box around it. Click on the arrow  in the upper left to open the menu. Select the Shape menu and select Show Sensitive Shape. A checkmark will appear next to "Show Sensitive Shape" and the map will show the exact project polygon location. Uncheck the selection to buffer the location again.
